

Milazzo Figure 7 | Reconciled TX direction

KP4MD / WB6RQN transmitting to VE6PDQ

Original publication image retained below; its printed direction is contradicted by the matched reports.

Main overlay includes non-joint reports before the Target-Active Gate. Lower panel uses eligible same-cycle pairs; no gap interpolation.

Gate counts refer only to 19 Dec 12:00–20 Dec 20:00 UTC. Target activity is checked across all captured receivers in the exact WSPR cycle.

Source: qsl.net/kp4md/wspr.htm | Current generated WSPRadar SQL executed offline through the regression SQLite adapter; not native ClickHouse.
