

Griffiths & Squibb · Figure 3 evidence comparison

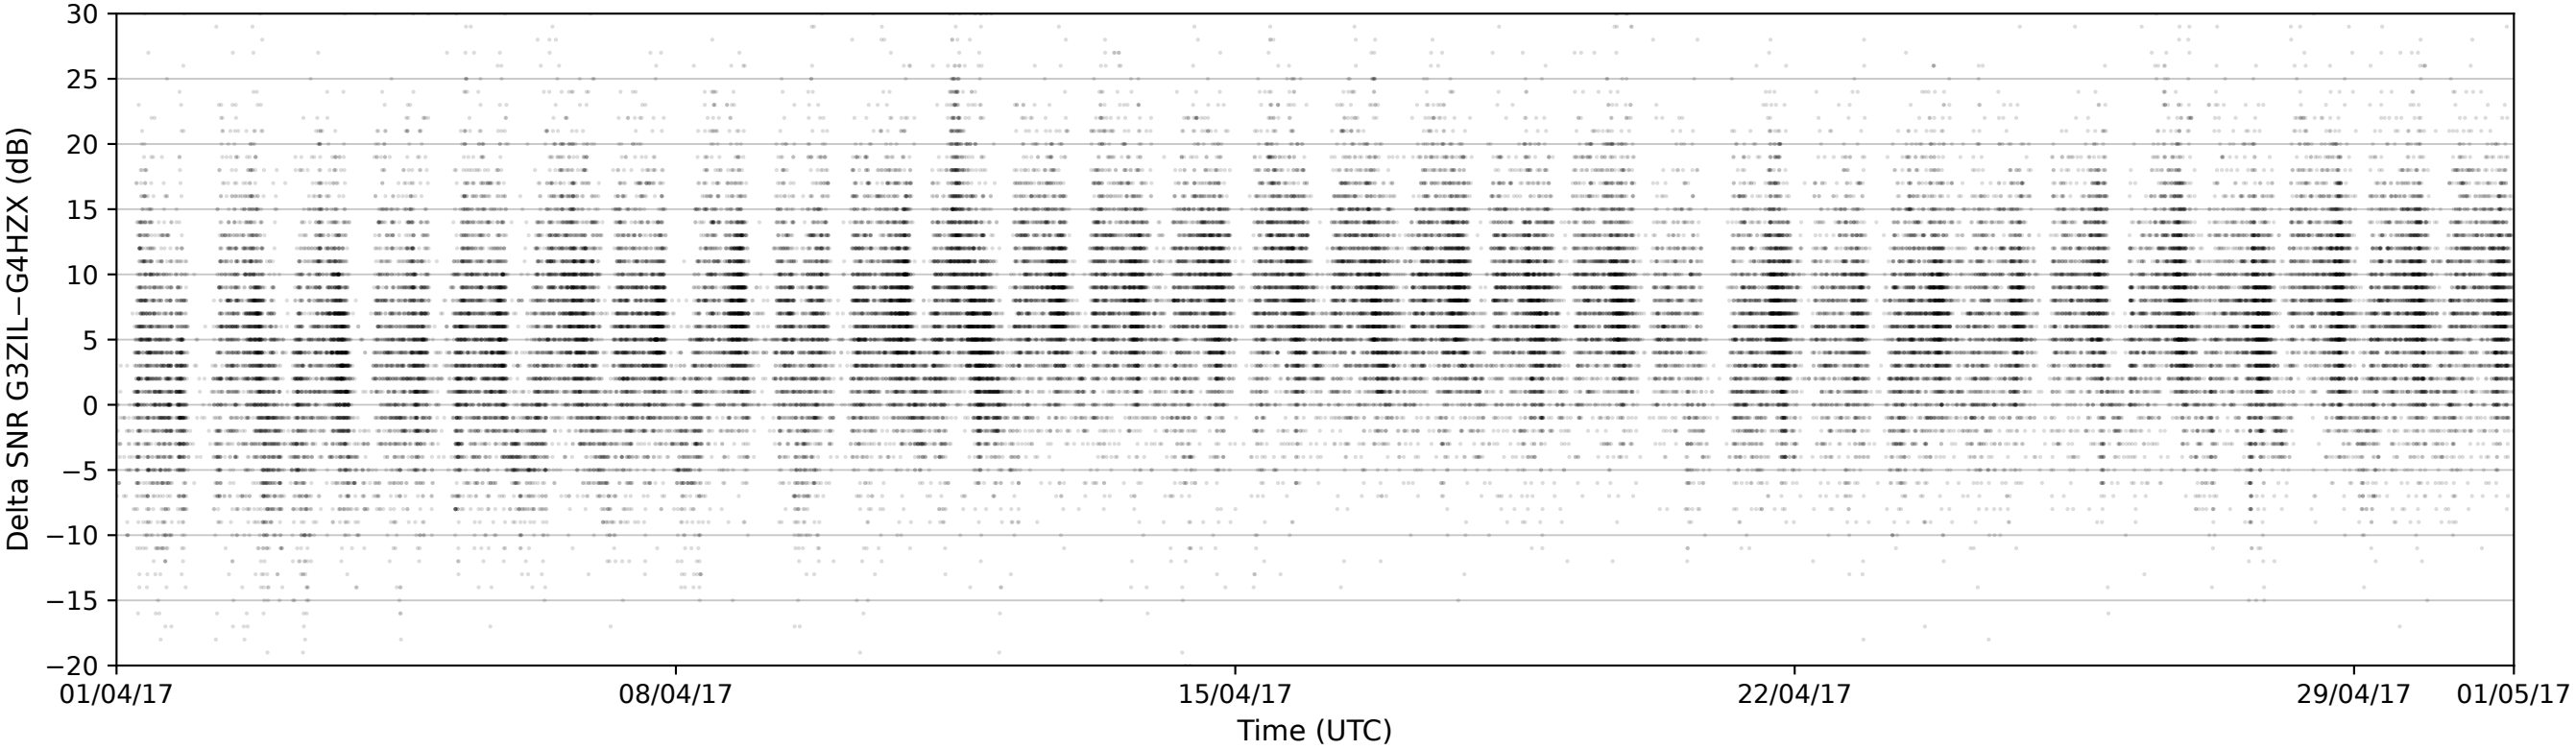

April 2017 | G3ZIL – G4HZX | 57,767 frozen same-cycle paired observations

A Publication

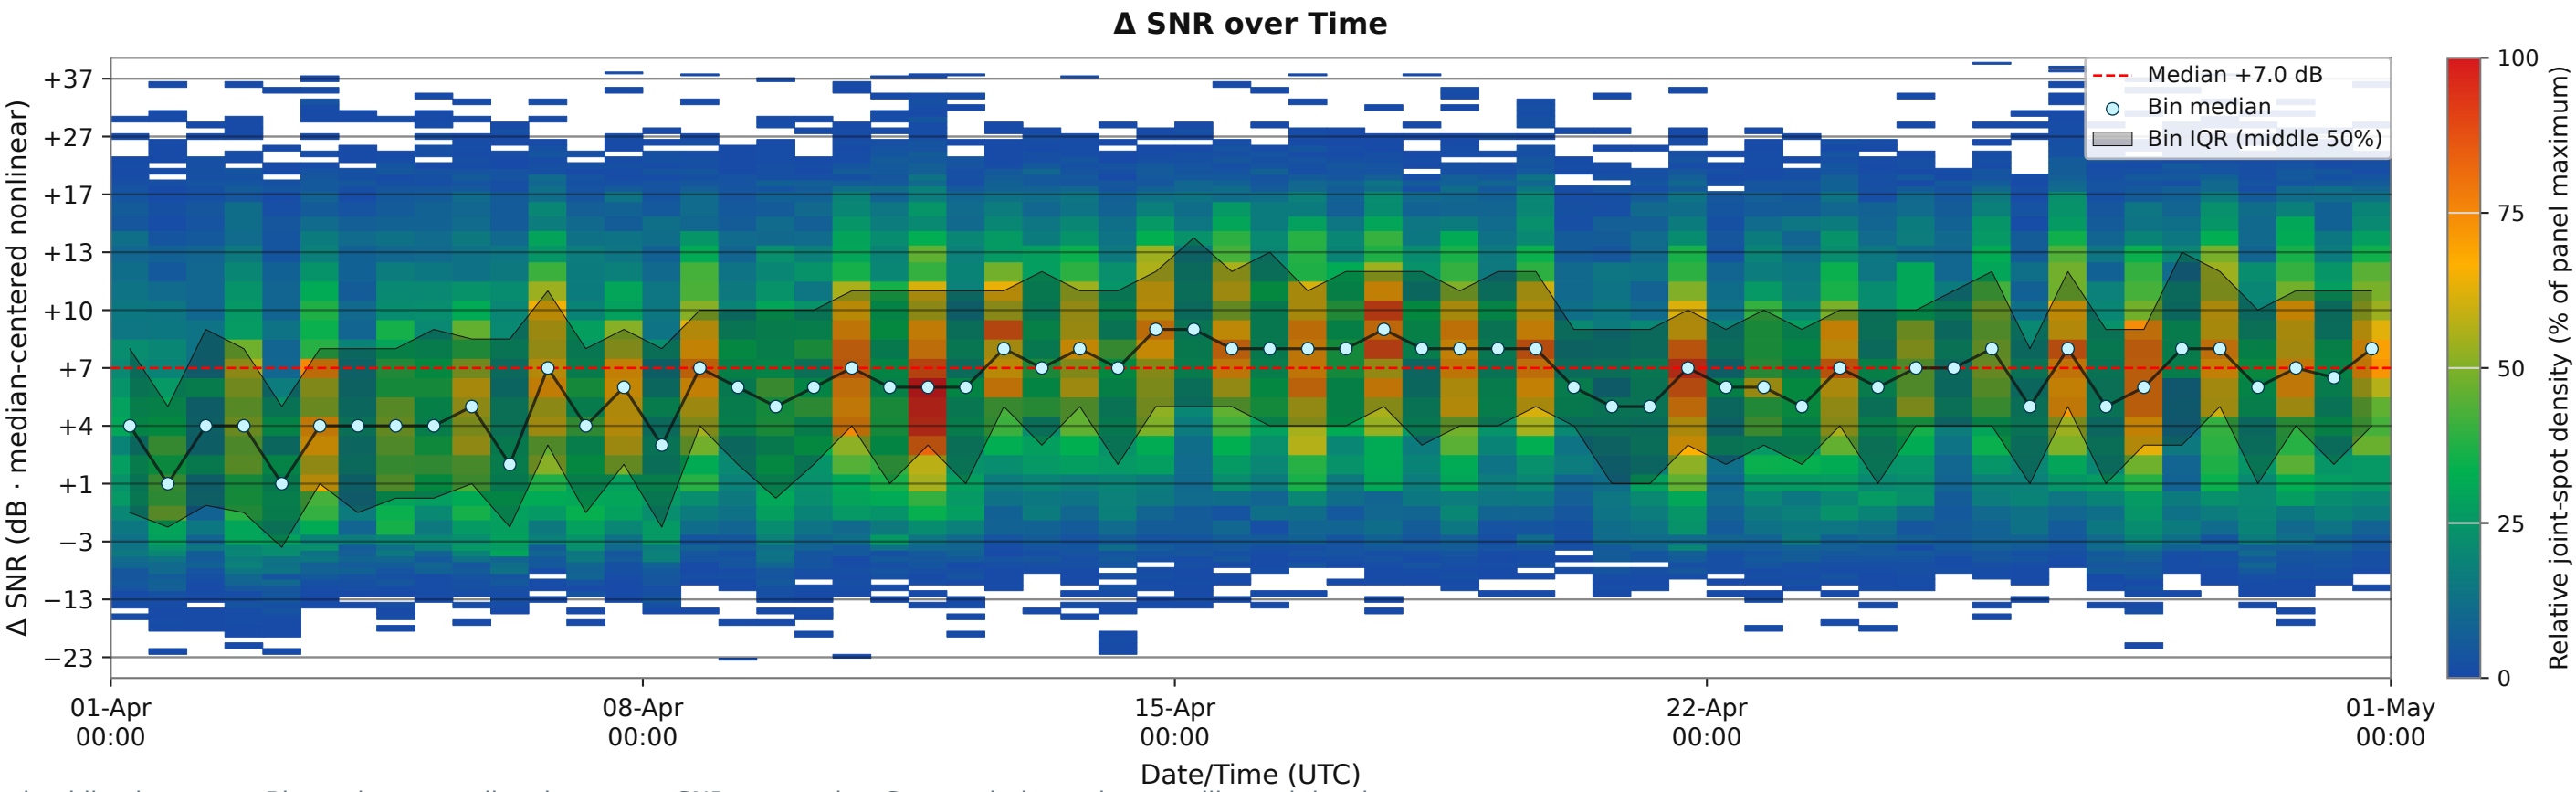

B Reconstruction from WSPRadar data

Every native pair; linear dB; no time binning or fitted offset

C WSPRadar view · white export · 12h bins

A: Original publication raster. Blue points are soil moisture, not SNR summaries. Scatter darkness is not calibrated density.

B/C: Same frozen pairs. C retains the production 12-hour × 1-dB density, medians, IQR and median-centered nonlinear axis.

The duplicate-sensitive April 16 tail is examined separately. Source: Practical Wireless, October 2017, p. 24, Figure 3.
