

WSPRadar.org reconstruction & comparison

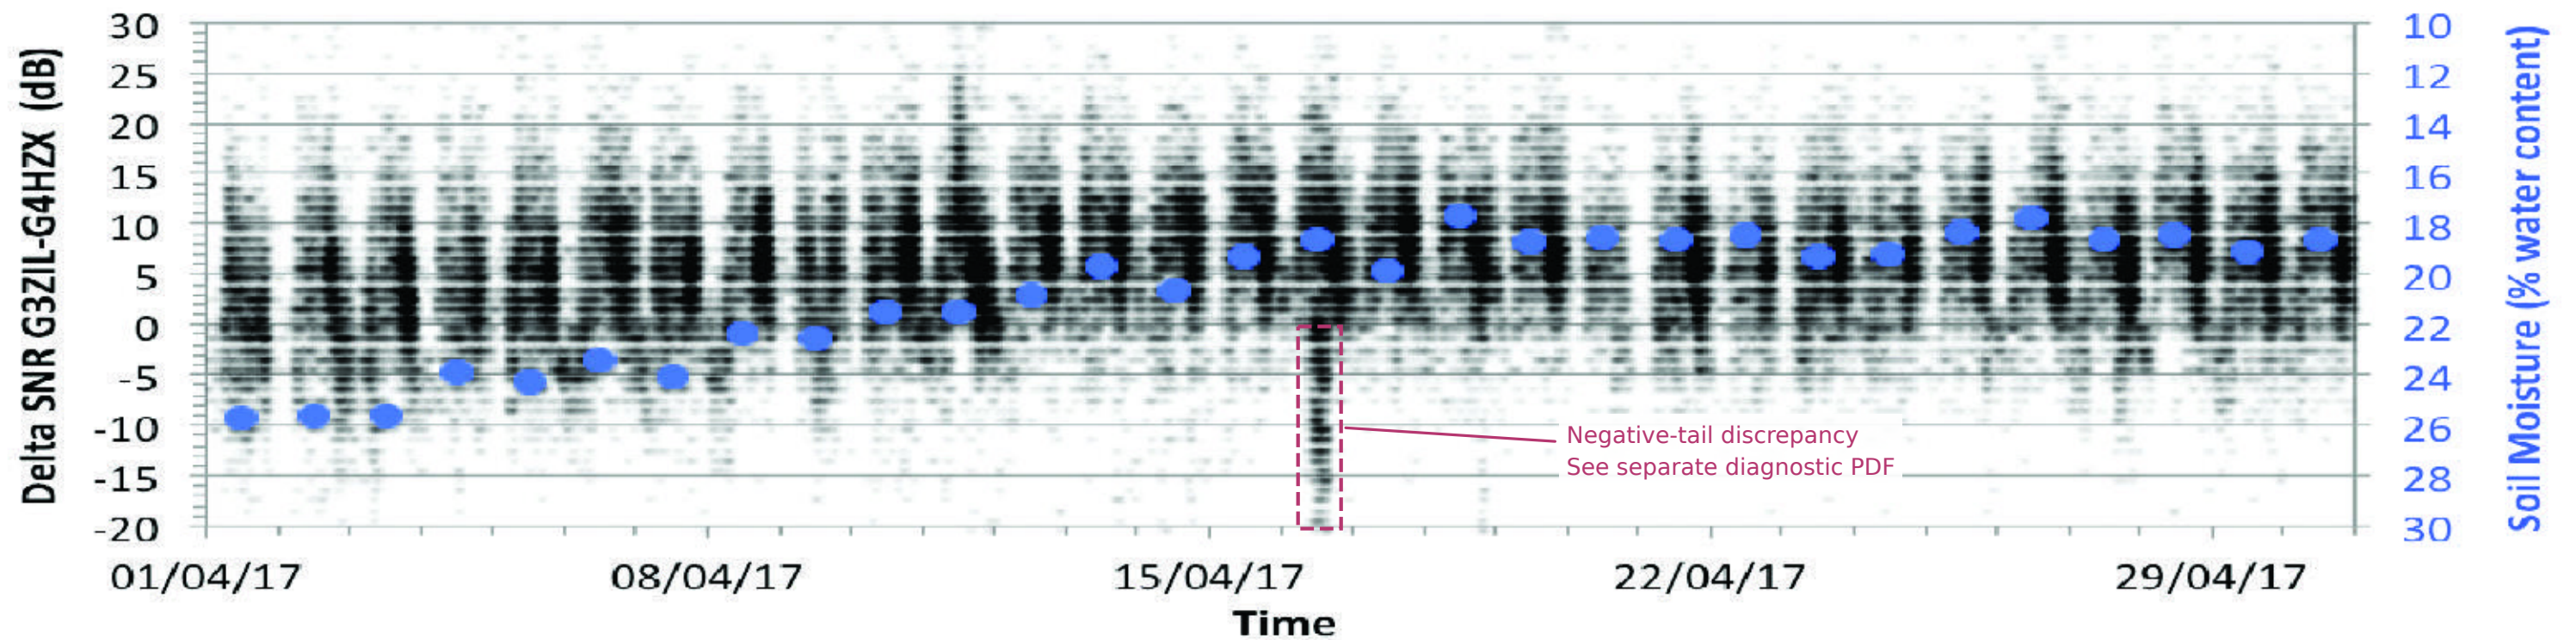

SNR differences over time

Referenced publication: Gwyn Griffiths (G3ZIL) and Nigel Squibb (G4HZX) (2017). *Improving HF Band SNR*.

Source figure: **Figure 3, p. 24** · Practical Wireless, October 2017, pp. 23-26

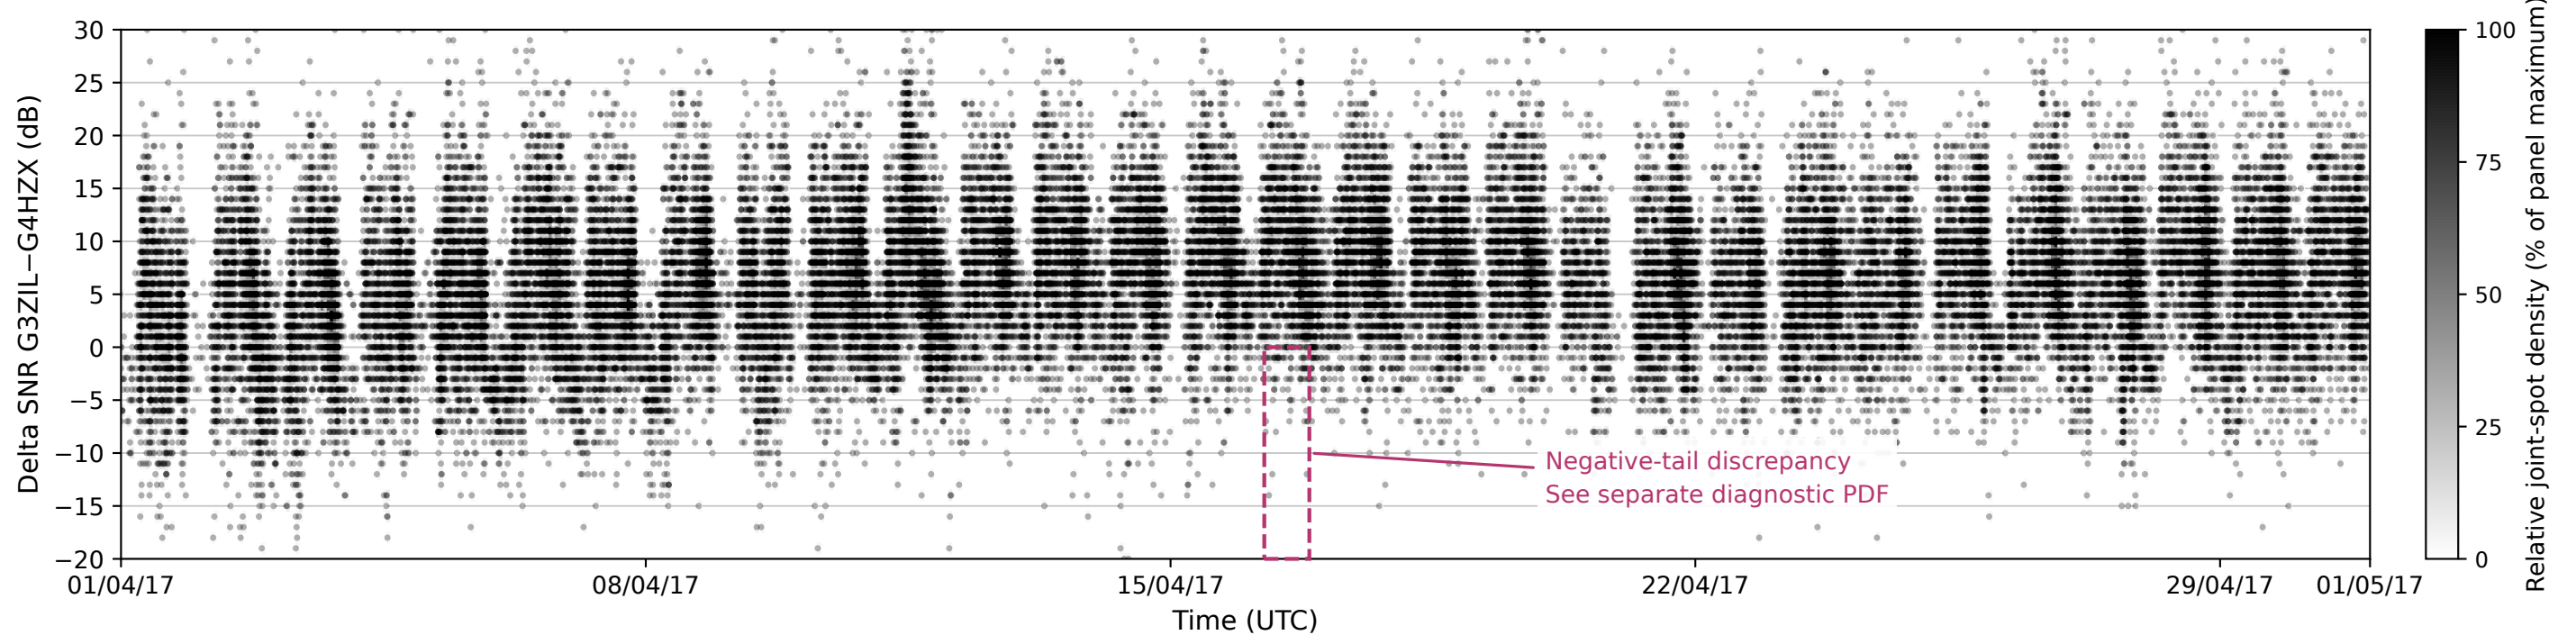

Demo: April 2017 | 40 m | $\Delta\text{SNR} = \text{G3ZIL} - \text{G4HZX}$ | 57,767 paired observations

A Original image from publication

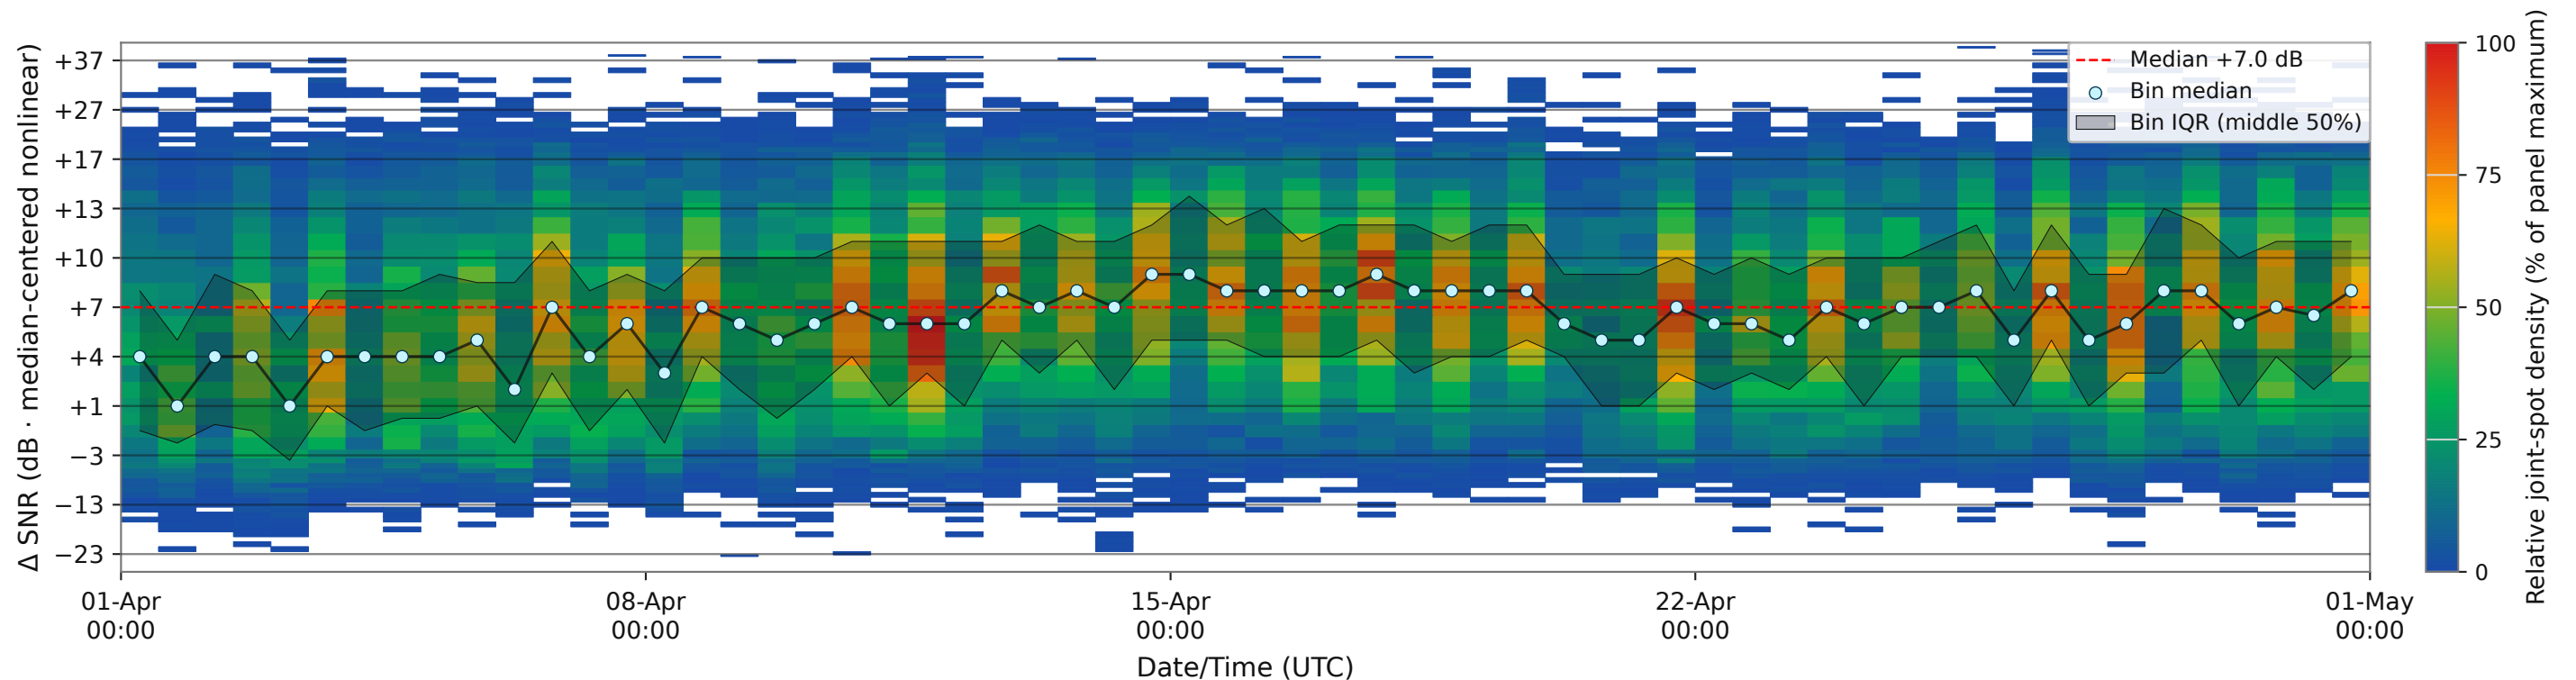

B Reconstruction from WSPRadar data

All 57,767 pairs; 1h × 1dB density

C WSPRadar view · Δ SNR over Time · 12h bins

A: Blue points show soil moisture, not SNR summaries. Scatter darkness is not calibrated density.

B: All paired dots over 1h density; the scale describes the background. C: 12h bins, medians, middle 50% (IQR) and nonlinear axis.

The demo opens with 24h bins; C uses 12h bins. Original figure: p. 24, Figure 3. The April 16 tail is examined in the separate PDF.
